### Projects

- **Star Wars Trivia-** Application featuring trivia questions built using HTML, CSS, JS, JQuery, and AJAX. Features dynamic integrated API and Star Wars Themed styling.
- **Tweed-ly-** A full-stack application featuring a collection of Men's Tweed suits from various different brands. Built using EJS, JQuery, JS, CSS, HTML, MongoDB, NodeJS (bcrypt, method-override, mongoose, express, etc.).
- **Discover-** A full-stack CRUD application designed by me and two other individuals that allows the user to search for music or movies using an integrated API choosing various returned data entries that they like to add to their personal collection. Built using AngularJS, MongoDB, NodeJS, HTML, CSS, JQuery with additional frameworks (bcrypt, express, express-session, mongoose, etc.).
- **Gameplayce-** A full-stack CRUD application designed by myself and another individual that simply allows a user to post reviews for games that are searchable through an external API via a search bar. Each review contains the user's name, the game they are reviewing, and the review itself. Built using ReactJS, PostgreSQL, Ruby, and Rails.
- **Wed-ly-** A simplified "to-do" list style application featuring a wedding planning checklist with task management functionality displaying the ability to learn a new technology in a short timeframe. Built using the self-taught framework of VueJS in the MEVN Stack (Mongo, Express, VueJS, and NodeJS)
- **Open System Projects-** Ambitious website and service that seeks to allow users to create custom commercial or industry based projects and garner support for their projects from the community at large. Currently under development.
- **Project Azure-** Daily Life Planner and Organizer application under development by myself primarily and a few other developers to create a unique application which aims to serve those who are disabled or have disabilities. The application incorporates most features likely not found on other applications and combines areas of life such as health, faith, finance, daily living, and even diet and nutrition, shopping, etc. Built using React Frontend and Python/Django Backend. Currently under development.
- **NeighborXM-** Project formed via a hackathon that has gained momentum and interest in developing a local area ticketing and crisis response system with an interactive map that would contain events, help requests, and other crisis requests on the map that are clickable and interactable. The project is currently in development.
- **Parking-Pal-API-** Database and API development for a client for property managers to cross reference vehicle descriptions and authenticate guest and resident parking by matching up the vehicle info with that in the database via a frontend interface. The database API will help streamline these requests in the correct method and format.

### Work Experience

#### Biggby Coffee - Assistant Manager

03/2020 - Current

- Helped launch new store location to help successfully build a business generate sales through customer service and suggestive selling techniques.
- Supported staff development and goal attainment by focusing on skill development and job satisfaction.

#### General Assembly - Software Engineering Fellow

06/2019 - 09/2019

- Full-Time and Full-Stack program conducted in a remote setting, providing experience with the latest front and back-end programming languages, tools, and methodologies.

#### Passport Pizza n' Ribs - Assistant Manager
